## WONDERS *of the* NEW YORK FAIR

Top, "chemical statue" at du Pont building. Bottom, General Motors' multi-radius speaker unit.

By Julian Leggett

WITH the aid of science and masters of modern showmanship, industry is ready to put on its most spectacular show of all time at the New York World's Fair.

A 10,000,000-volt generator will hurl giant bolts of lightning with sufficient force to split tree trunks while wide-eyed fairgoers watch from a safe distance. A 130-foot locomotive, the largest in the world,

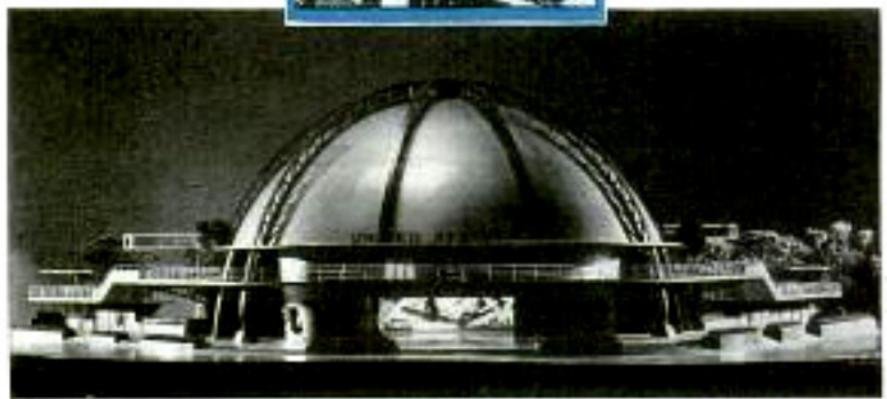

will run at full speed on a bed of masonry. Today's version of the fabled "magic carpet," chairs mounted on an escalator, will carry visitors on a thrilling ride during which they will seem to float hundreds of feet above the earth while watching a layout of highways of the future and listening to a 150-voiced, twenty-ton robot describe transportation facilities of tomorrow.

Slowly revolving on pontoons in a 20,000-gallon concealed moat, a turntable 100 feet in diameter will portray the automobile's cycle of production in moving displays mounted on its pyramid-like superstructure. With the aid of color and light, fluids will seem to circulate through giant vessels and retorts in a "chemical statue" towering 100 feet. Mysteries of television will be unfolded in a building resembling a giant radio tube. Full-sized automobiles will race up spiral ramps and circle the top of another huge building to give visitors an exciting ride on an elevated highway. A machine with an electric voice will create human speech as its operator presses keys and turns knobs.

United States Steel Corporation, literally bringing the mountain to Mohammed, will present a miniature steel plant—blast furnace, open-hearth furnace and roll-

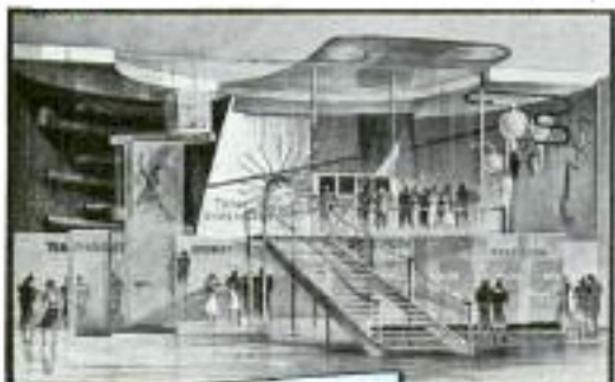

*Top, casting floor of U. S. Steel's Blast furnace, with man's hands illustrating size. Center, building up word of capacitors at General Electric's lighting plant. Bottom, U. S. Steel's "inside-out" building*

ing mill—to illustrate its operations. An ore-mining diorama also will be a part of the exhibit in an "inside-out" structure, the huge dome of which will be supported by external structural members. Visitors will be given a glimpse into the future by means of a large-scale cyclorama which will portray the possible evolution of the city, the farm, the factory, the highway and the home as built with steel. Anchored in concrete, ten steel trusses forming the "inside-out" supporting members curve upward, meeting at a point sixty-six

*Top, left, statue of "Speed" by Joseph E. Rensler at the fair. Right, Ford's "Road of Tomorrow" zone over motor building. Center, men figures used on Ford turntable. Bottom, the turntable, sketched to show moat and the small motor used to turn the giant exhibit.*

feet above the ground. This framework, weighing 350 tons, will conceal lighting fixtures to illuminate the polished stainless steel hemisphere covering the exhibit.

In addition to a giant lightning-killer, General Electric Company will present many recent spectacular developments in its "house of magic." The artificial lightning equipment consists of two generators, each with a capacity of five million volts. Each comprises six vertical stacks of capacitors piled up for thirty-four feet. Time for operating the unit is fifteen seconds, that is, for the voltage to reach its full value before discharging across a thirty-foot gap with a blinding flash.

In harmony with the "World of Tomorrow" keynote of the fair, the Ford Motor Company's exhibit will be climaxed by the "Road of Tomorrow," which circles the top of the building and over which visitors will ride in Ford and Lincoln-Zephyr cars to obtain an impression of the safety highways of the future. The Ford exhibit also includes the spectacular turntable on which is presented the "Cycle of

Production." Rising like a pyramid, the turntable will present eighty-seven individual displays, many of which will be in motion, and thirty-seven automobile parts. At its top will be three complete cars. Only a two-horsepower electric motor is required to rotate the 100-ton turntable and thirty-three tons of displays and automobiles. Manufacture of certain parts will be conducted on a platform near the turntable. On the platform will be a foundry, small steel rolling mill and other equipment for casting, stamping, drilling and machining the metal. An electric furnace will be used to melt the metal. The Ford exhibit was designed by Walter Dorwin Teague of New York.

## Wonders of the New York Fair

(Continued from page 155A)

The giant locomotive operating at full speed is a part of the railroad exhibit, sponsored by twenty-seven eastern railroads. The engine, built especially for the fair, weighs 519 tons and develops 7,000 horsepower. Other features of the exhibit include "Railroads on Parade," a great stage presentation of the romance of transport development in America in the last hundred years; "Railroads at Work," a huge diorama showing for the first time the complete operation of a modern railroad

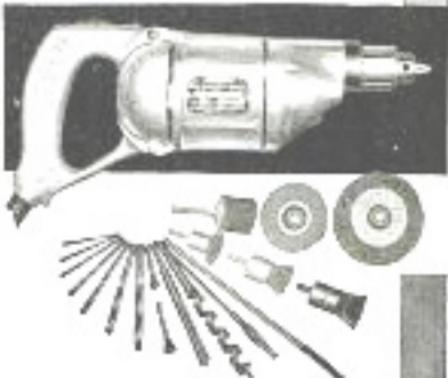

*Huge photo-diagrams will draw attention of fair-goers to the Eastern Kodak building.*

system, and "Railroads in Building," another large-scale diorama showing the actual construction of railroads and equipment. In addition, there will be track exhibits of modern foreign and American locomotives and trains.

A conception of motor traffic facilities of tomorrow will be projected in the General Motors exhibit. Designed by Norman Bel Geddes, it includes the "magic carpet," chairs mounted on an escalator. Visitors thus will be transported over what will appear to be future express and feeder highway systems. At times the spectator will have the sensation of seeing these things from an altitude of hundreds of feet above the earth. Sound effects and the voice of a narrator will be heard only within the shell of the visitor's chair. The tour will be climaxed when the visitor emerges from his traveling chair into a full-sized street intersection in the "World

# New 5/16" Utility Drill ADAPTABLE TO DOZENS OF USES

The new Black & Decker 5/16" Utility Drill is unique to the "mid" degree. The added chuck capacity and correct spindle speed of this remarkable tool permit the use of many varieties of bits, including twist drills for wood, metal and concrete, carbide bits, counterboring cutters, wire brushes, drum sanding attachments, grinding wheels and numerous other tools.

Can be used in productive work, maintenance use, general shop use or in a bench drill stand for more accurate work. It is strong, light, well balanced, ruggedly built and highly powered. And because its versatility gives it more value than any other drill in the same price range, you can't afford to be without this "5" Utility Drill. Sold by leading jobbers. Write for complete information on this new Drill today. The Black & Decker Mfg. Co., 604 Dorval, Conn., U.S.A.

# BLACK & DECKER

of Tomorrow." Extending for more than a city block in four directions, the spectacular intersection will present a living picture of the architecture, motor-traffic regulations and pedestrian facilities of the future.

Sound for the traveling chairs will be supplied by a twenty-ton system capable of delivering 150 different descriptive talks at the same time. The giant speaker is constructed on a steel drum, eight feet in diameter. The drum, rising twelve feet into the air from a circular base, revolves, carrying ribbons of sound film in front of

Giant revolving cash register tape exhibit building  
at National Cash Register company.

tiny needles of light, whose variation is no greater than one-thousandth of an inch. From that point the sound is carried to 150 speakers.

A spectacular tower symbolizing chemical research stands before the exhibit building of E. I. du Pont de Nemours and Company. Ten feet in diameter and 100 feet high, the tower incloses within steel framework a greatly enlarged representation of the complex apparatus found in chemical research laboratories. Fluids will appear to circulate within the tower, while from the top a long plume of vapor will seem to rise. The du Pont exhibit is called the "Wonder World of Chemistry," designed by Walter Dorwin Teague. Among its features will be a demonstration of the new synthetic textile, nylon; a model nitrogen fixation plant; development of synthetic aromatic bases, used in perfumes; synthetic methanol, used in anti-freeze;

## STANLEY CHISELS

### HOLD THAT EDGE!

Because Stanley Knows chisels know steel selection, forging, tempering, grinding. Stanley Knows, too, how to design a handle that's comfortable and built for long, hard service. You have a wide choice in all sizes.

**STANLEY**  
A finely balanced tool for the artisan. Handle of tough, non-cavitate malleable blade and tang forged from one piece of finest plated steel.

**EVERLASTING**  
Built for a lifetime of hard service. A complete forging from head to blade preserves hammer blow direct to cutting edge. Rubber-coated Hickory handle. Tool steel blade.

**ROCKET**  
A fine, moderately priced tool for general work. Handle and socket are forged in one piece. Selected straight-grained Hickory handle, capped with a leather wristband.

Your hardware dealer will be happy to show you Stanley Chisels. Or write for Catalog 24 . . . 1937. Send us your name.

## 26 NEW PLANS FOR HOME CRAFTSMEN 50c

Modern desktop holder! Night table! Magazine stand! Party tray... and 22 other useful things you'll want to build. Complete working drawings. Each plan on a separate sheet of rough paper. Send one or several now for the new Stanley Plan Packet.

*Said little Red Riding Hood-*

**"How handsome  
you look, grandpa, since you got  
a Barbasol Face"**

WHY not resolve right now to break with old-fashioned shaving methods that tend to dry, tighten and wrinkle the skin?

Why not get yourself a smoother, softer, younger-looking Barbasol Face?

For Barbasol is a lot more than a wonderful beard-softener that gives the quickest, cleanest shave you ever had. Barbasol also contains certain beneficial oils that protect the skin from irritation while you shave—that soothe the skin after you've shaved.

Try Barbasol for just ten days and we promise, you'll be pleased as Punch with the improvement in your skin—free from roughness and irritation, no half-cut stubble—a smoother, younger-looking face. Your druggist carries Barbasol in three sizes: Large tube, 25¢; Giant tube, 50¢; Family-size jar, 75¢. Scalpel-sharp Barbasol Blades, 5 for 15¢.

For Modern Shaving

No Brush • No Lather • No Rub-In

(Continued from page 151A)

and "Nitramon," the explosive so safe to handle and use that it has removed all former transportation hazards. Another interesting display will be a pest-control laboratory, showing how fungicides and insecticides for the control of such pests as the housefly and the Japanese beetle are tested and developed.

One of the most brilliant spots at the fair will be the Glass Center, housing the combined exhibits of Corning Glass Works, Owens-Illinois Glass Company and Pittsburgh Plate Glass Company. Designed by Shreve, Lamb and Garmon, it will contain more than 20,000 square feet of plate glass, structural glass and glass block and will describe a huge semi-circle. Crowning the building will be a tower of glass blocks. A metal helix winding up the tower will be outlined in fluorescent tubing for illuminating the tower at night. Glass blowers in action, the spinning of glass filaments one twentieth the diameter of a human hair into fabrics and a panorama depicting the 5,000-year history of glassmaking will be among the exhibit's features.

Television is the central theme of the exhibit of Radio Corporation of America. In special viewing rooms the public will be shown pictures which have been flashed through the air. Many other unusual radio and electronic devices also will be shown in the main building, which is shaped like a radio tube. Near by will be a slender radio mast marking the RCA Communications exhibit, at which visitors may see how radio messages are transmitted to all parts of the world.

Automobiles careening over a huge field, crashing head-on into one another, turning somersaults and doing other perilous stunts will thrill visitors to the exhibit of the B. F. Goodrich Company. The object of this death-defying exhibition is to afford dramatic testing of anti-skid and other characteristics of tires. Grandstands will be provided for spectators. At the main entrance of the exhibition building will be a ninety-foot tower housing a "tire guillotine." Through its glass sides visitors will see a heavily weighted blade plunge downward from varying heights directly upon automobile, truck and airplane tires.

Westinghouse Electric and Manufacturing Company's exhibit will portray many

# GREAT NEWS

FOR 6,901,587\* FISHERMEN...

NEW EVINRUDE "MATE"

Patented by Evinrude Outboard Motor Company

**GREAT NEWS** for all fishermen who want their personal boats on the water to pull from the biggest variety of fish and pleasure. New Evinrude presents an "Island" under the world and over all of a really unique table for **WADY WADY & MATE**. It's built so solidly equipped at a heavy price, yet a dozen of standard sizes and colors. A genuine American boat with reliable Power steering controls. Get full racing and a racing spirit with pneumatic needles good.

#### SEND FOR FREE CATALOG!

Write today for free catalog of **1934 Evinrude** boats. It covers the line from the smallest power ratings up to 9 horsepower. Every model shows the general shape and features of your boat, the color and finish you prefer, and every contact part. Write today.

(Continued from page 152A)

phases of that industry in technical and scientific displays. The American Institute Science and Engineering Club will be in operation, with boys and girls between twelve and eighteen working at benches producing useful products. The exhibit will contain a theater where an interesting short play will depict electricity as the universal servant.

In the Eastman Kodak building, visitors will find a swift, complete, vivid survey of photography today. Each phase will be included—amateur photography in color and black-and-white, photography in medicine and dentistry, X-rays, electrocardiography, photomicrography, visual education, home movies and others. A feature of the building will be a slender, sixty-eight foot tower on which lights will play in rhythmical progression. The tower will be triangular and from it will project ten fins on which twenty huge photomurals will be mounted, each eight feet wide and eleven feet high. At the base of the tower will be three revolving photomurals. Inside the building will be an enormous screen, twenty-two feet high and 187 feet long, on which will be flashed, in single panoramic views and in groups of pictures, the greatest show of color photography ever seen. On this screen, small full-color transparencies will appear at a magnification of 50,000 times the area of each. Giant projectors, each weighing nearly one ton, will provide illumination for showing the transparencies.

Full-scale manufacture of automobile tires and the portrayal of the story of rubber will feature the exhibit of Firestone Tire & Rubber Company. Unique in this display will be a full-sized reproduction of a thriving American farm, livestock, farm hands and all. This part of the exhibit will demonstrate how the American farm has become modernized by the adoption of pneumatic tires to every kind of wheeled farm implement. The tire plant will produce a finished tire every four minutes before the eyes of fair visitors.

Displaying the progress of time-telling from the prehistoric smoldering rope and the Egyptian slave gong to the timepiece of tomorrow, the "Chronicle of Time" will be presented by the Elgin Watch Company. The exhibit will be housed in a semi-cir-

cular hall. Also in the building will be an astronomical observatory in which will be demonstrated the method of determining correct time from the stars.

Contrast between the modern electric gearless elevator and the old steam elevator of the 1890s will be drawn in the exhibit of the Otis Elevator Company. Cabs of the two elevators will be displayed.

"The City of Light," a spectacle designed by Walter Dorwin Teague, will be presented by the Consolidated Edison Company of New York. Its central figure is a three-dimensional, animated architectural model of the New York metropolitan area, about one city block long and over three stories high. More than 4,000 buildings, studded with 130,000 windows, will be shown in this giant diorama. A complete model subway system, with trains designed for a run of 35,000 miles, will be a part of the exhibit.

### Removable Tray for Bird Cage Is Easy to Service

A removable tray for a bird cage can be serviced without putting the birds inside. Cups and feeding perches are bracketed to the tray, and all this equipment is slipped out easily by raising a sashum at one end of the cage. Two upper perchums are taken out through the side, and the sashum goes through the top. There is nothing to interfere with the removal of paper trays at the bottom of the tray.

Perches, cups and tray with feeding and water cups were easily removed from bird cage for cleaning.
